/dlobe lib="In the library was constructed according to Site 2: Not I; The library was constructed according to Sold Denatured mRNa was size fractionated on a 1% agarose gel. First strand cubMA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded coDMA was size selected according to mRNA size fraction, ligated with EcoR I adaptor, digested with Not I, and then cloned directionally into pXX-Asc vector. The library tag sequence located between the Not I site and the polyA tail, is IGAGAGAGC. This library was created for the University of Iowa Mouse Brain Molecular Anatomy Project (BMAP); 'Gene Discovery' in the Developing Mouse Nervous System', supported by National Institutes of Mental Health (NIMH), Hemin Chin, Ph.D., program coordinator:"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                pagaragrantagancogaccoccrattritritritri.3'] from 48 microgram of total RNA, treated with T4 DNA polymerase, and purified by ethanol-precipitation. The cDNas were ligated to Lone-linker LL-Sal3 (Ref. Development 127:1737-1749 (2000) [PMID:10725249]), purified by phenol/chloroform, and separated from free linkers by phenol/chloroform, the cDNas were digested with SalI and Centricon 100. Then, the cDNas were digested with SalI not I plasmid vector. The DH10B E. Coll host was trasmformed with igation mixture by the standard chemical method. The average insert size is about 1.9 kb. The library was constructed by Yulan Piao (NIA)."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         /organism="Mus musculus"
